

**OSV Trails from Dyke Bridge to Toms Neck are not mentioned in this application, and are regularly subject to flooding. See photos attached. All photos taken October 16, 2023 between 3:06PM - 3:09PM. There had been no rain, and this flooding is not the result of astronomical high tides or storms. This is at a regular high tide. Water is coming up from the ground in these areas. This is not the result of any overwash. What is the point of building an island at Tom's Neck no one can get to? If you want people to be able to access Tom's Neck via Recreational OSV you have to remediate the narrows first.**
