

Chappy Cell Committee

10/2/15 9am Gurnitz, Kennedy, Darack, Filley on phone Becker and Cobb(?) - - Edgartown Town Hall

A report from the subcommittees with Bob going for the Tower first. A discussion of whether a tower could work at the 100-120 foot height and what it meant if we had multiple carriers. It was decided to contact Ken at AT&T to hear directly from him what he would be comfortable in needing and height limits he would be willing to go with. A discussion of tower location and number of towers followed. In the end the committee felt that we need to focus on 1 site only. Adam noted that in previous AT&T discussions that they would only like to do 1 tower, not multiples for Chappy. Roger gave us an update on the DAS progress and agreed to correspond with Enright to get the Verizon questions answered. A discussion of how to get images of what a tower might look like followed. Roger suggested using a drone for analysis. Chris Seidel of the MVC was mentioned to provide us with imagery. The committee began talking about what the report to the selectmen should contain. Roger asked that any report on the survey be reviewed by the committee before being presented in the report. Next meeting 10/8 at 4PM

Approved 6/15/17
